

Highly Pathogenic Avian Influenza (HPAI) situation in France

Updated 08th of November 2024

I. Departments with outbreak

Four departments currently have a restriction zone due to outbreaks: Finistère, Morbihan, Landes and Allier.

The three last outbreaks in the Morbihan and in the Landes were confirmed in vaccinated duck farms. The infection was detected during the post-vaccination surveillance. All the animals in the outbreaks were eliminated.

INFECTED DEPARTEMENTS	Number of outbreaks	Date of the last outbreak (beginning of the outbreak)	Theoretical date of recovery of the free status
FINISTERE (29)	2	14/10/2024	15/11/2024
MORBIHAN (56)	4	01/11/2024	02/12/2024
LANDES (40)	1	05/11/2024	08/12/2024
ALLIER	1	01/11/2024	9/12/2024

Control measures within the zoning

As for all outbreaks, as soon as the suspicion was raised, control measures were triggered within the EU regulatory zoning (3 km Protection Zone "ZP" and 10 km Surveillance Zone "ZS" around the farm): culling of poultry on affected farms (at the latest the day after the national reference laboratory - NRL confirmation), reinforcement of biosecurity measures, census of farms and ban on poultry movements.

The contamination hypothesis for these outbreaks is *via* wildlife.

II. Free status recovery

DEPARTEMENTS	Theoretical date of recovery of free status
FINISTERE (29)	15/11/2024
MORBIHAN (56)	02/12/2024
LANDES (40)	08/12/2024
ALLIER (03)	9/12/2024
